### Engineering measures

- **Engineering measures**: Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

### Personal protective equipment

- **Respiratory protection**: Use respiratory protection unless adequate local exhaust ventilation is provided or exposure assessment demonstrates that exposures are within recommended exposure guidelines.

- **Eye protection**: Wear safety glasses with side shields (or goggles).

- **Protective measures**: Ensure that eye flushing systems and safety showers are located close to the working place.

- **Hygiene measures**: Handle in accordance with good industrial hygiene and safety practice.
